

VILLAGE CENTER INN SKI RESORT

Multi-Story Custom Fireplaces and Fans

THE CHALLENGE

The Village Center Inn in Jackson Hole, WY is a new luxury multi-story condo and hotel in the heart of Teton Village set to open Thanksgiving of 2017. Better known as “The Vil,” Teton Village is a popular spot for outdoor adventurers looking to ski, snowboard and hike. The Inn is situated at the base of Jackson Hole Mountain Resort amid five square miles of espresso stands, restaurants, bars, live music, shops and more.

The owner, North Club LLC worked with [Commune Design](#), Zaist Construction Management, Mechco and Earthcore Industries to build the Village Center Inn, a 53,000-square-foot multi-story structure with first- and second-floor retail and restaurant space, four condos, and a dozen hotel rooms.

They needed a total of six custom fireplaces: one in the bar area, one in the main lobby, and four in the condos. The lower part of the complex had a difficult chimney run with many horizontal and vertical twists and turns, terminating six stories up. They wanted a smoke-free, open-hearth design; only the highest-quality [chimney fans](#) could meet the architectural requirements of the job while delivering clean, quiet, highly efficient operation.

THE SOLUTION

Earthcore Industries and ENERVEX installed six custom gas and wood fireplaces and fans including the Isokern Magnum Series (All Fuel) 60" and 48" Fireplaces with ENERVEX RS high-efficiency chimney fans.

JOB PROFILE

Location:

- Jackson Hole, WY

Completion:

- November 2017

Owner:

- North Club, LLC

Architect:

- [Commune Design](#)

Contractor:

- Zaist Construction Management (GC), Mechco Inc. (Mechanical Contractor)

ENERVEX Rep:

- Earthcore Industries - Isokern Fireplaces

ENERVEX's RS line is a high-temperature chimney fan product available for both gas- and wood-fired fireplaces, and for both horizontal and vertical terminations. The new fans are easier to maintain, quieter, and more efficient at controlling air flow so that smoke and other products of combustion do not escape from the fireboxes.

The ENERVEX RS Chimney Fan

In addition, Earthcore built 72" x 38" custom fireboxes for the Isokern Fireplace Systems and gas logs for the fireplaces, along with imported Belgium Firebrick for aesthetic appeal.

THE RESULT

The Village Center Inn will open its doors with six stories of space containing beautiful, energy-efficient gas and wood fireplaces. The complementary fit of Earthcore's Isokern Magnum Series Fireplace Systems with ENERVEX fans made installation simple, while giving occupants a perfect flame at all times. The Magnum Series' oversized openings, proprietary straight-back interior design, innovative contoured shelf, and modular design bring luxurious aesthetic value, low maintenance, and guaranteed performance – while the fans provide a constant, reliable draft to save operating costs and keep guests comfortable/safe from smoke, soot and ash.

“The high quality and seamless fit of ENERVEX's fans with our Isokern chimney systems allowed us to turn a difficult design into a gorgeous open-hearth fireplace solution that makes draft control effortless.”

- Tom Krebs, VP of Global Sales and Marketing
